Many distributed services are susceptible to attacks by malicious clients that can significantly degrade their performance. Scalable distributed services make use of a variety of techniques which are vulnerable to such attacks. We explore the survivability of services when attacks target the scalability techniques employed by the services. In particular, we explore how the effectiveness of caching can be degraded when malicious clients manipulate cache management algorithms. We present an att ...

### 2 [Discovering models of software processes from event-based data](#)

Jonathan E. Cook, Alexander L. Wolf

 July 1998 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume 7 Issue 3

Many software process methods and tools presuppose the existence of a formal model of a process. Unfortunately, developing a formal model for an on-going, complex process can be difficult, costly, and error prone. This presents a practical barrier to the adoption of process technologies, which would be lowered by automated assistance in creating formal models. To this end, we have developed a data analysis technique that we term process discovery. Under this technique, data ...

### 3 [Temporal sequence learning and data reduction for anomaly detection](#)

Terran Lane, Carla E. Brodley

 August 1999 **ACM Transactions on Information and System Security (TISSEC)**, Volume 2 Issue 3

Publisher: ACM Press

 Full text available: [pdf\(628.31 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The anomaly-detection problem can be formulated as one of learning to characterize the behaviors of an individual, system, or network in terms of temporal sequences of discrete
